(Open to Relocate)

Software Engineer with 4+ years of experience architecting distributed, event-driven applications using Java, Spring Boot, React, Kafka, and AWS. Proven track record in scaling high-throughput payment platforms to process 10M+ annual transactions and 500K+ daily events. Strong background in end-to-end product engineering, cloud infrastructure automation, and integrating AI/ML capabilities for multi-tenant enterprise solutions.

Professional Experience

JPMorgan Chase & Co. Remote, US
Software Engineer *Mar 2025 – Present*
Engineered a Java/Spring Boot payment platform handling 10M+ annual transactions and 500K+ daily Kafka events, reducing latency by 30%.

- Architected robust RESTful microservices using Spring Boot to support core data routing, ensuring high availability and fault tolerance across distributed systems.
- Engineered robust backend services using Java 17 and Spring Boot to validate and route 10M+ annual financial transactions.
- Engineered responsive, component-driven user interfaces using React and TypeScript to streamline complex data visualization and workflows for internal users.
- Incorporated LLM-driven query synthesis and vector retrieval capabilities to accelerate internal log analysis and issue resolution.
- Integrated robust backend APIs with Redux state management to deliver seamless, real-time data updates on enterprise-facing dashboards.
- Engineered highly scalable, event-driven data pipelines using Kafka to ensure reliable ingestion, transformation, and routing of large-scale datasets for downstream analytics.
- Designed and optimized data access layers and API integration points, reducing payload processing time for complex, high-volume transactions.
- Streamlined software delivery by optimizing CI/CD pipelines via Jenkins and GitHub Actions, enabling safer, more resilient, and frequent production deployments.

Accenture Chennai, India
Software Engineer *Oct 2021 – Jul 2024*
Secured enterprise applications for 25K+ users with Okta/OAuth 2.0 and migrated Docker services to AWS, boosting API speeds by 20%.

- Spearheaded the decoupling of legacy components into scalable, independently deployable services, significantly improving overall system maintainability and release velocity.
- Standardized deployment artifacts by containerizing distributed backend microservices using Docker.
- Orchestrated scalable cloud environments on AWS by leveraging containerization and infrastructure-as-code principles, ensuring consistent and reproducible deployments.
- Engineered secure API gateways and backend data validation layers, strictly adhering to enterprise compliance and access-control standards.
- Designed and optimized efficient data extraction and workflow automation processes, sanitizing high-volume relational data for advanced analytical and automated processing.
- Implemented comprehensive logging, telemetry, and alerting strategies using CloudWatch to proactively detect anomalies and accelerate root-cause analysis.

Projects

Multi-Tenant Knowledge Search Platform | *Java 17, Spring Boot, React, PostgreSQL/pgvector, Redis, AWS, Docker, Terraform*

- Built hybrid retrieval over 30K documents (200K–250K chunks) using pgvector HNSW, PostgreSQL full-text search, and Reciprocal Rank Fusion; achieved ∼500 ms typical and ∼1 s p95 latency.
- Evaluated retrieval on ∼200 labelled queries, achieving 87% Recall@5, 92% Recall@10, and an 83% acceptable-answer rate for end-to-end RAG responses.
- Supported ∼12 tenants, 300–500 users, and 4 roles; enforced tenant isolation at API/data-access layers and validated 35–40 automated authorization/security scenarios.
- Provisioned ECS Fargate, RDS, ElastiCache, ALB, and Secrets Manager with Terraform/GitHub Actions, reducing setup/deployment from 2–3 hours to 20–30 minutes and enabling multiple deployments per day when needed.

Offline-First Point-of-Sale System | *Rust, Tauri 2, SQLite, React, TypeScript*

- Built and packaged an offline-first Windows POS and tested it in a live convenience-store environment, supporting sales, refunds, inventory, promotions, loyalty, and shift reconciliation across a 10K+ SKU catalog and 5K+ real-world sales.
- Protected transaction integrity with atomic SQLite operations, RBAC, Argon2 PIN hashing, append-only audit logs, and duplicate-payment controls; validated 10K+ integrity-test transaction attempts across 20+ failure/concurrency scenarios with zero duplicate charges.

Skills

Languages: Java, TypeScript, JavaScript, SQL, Python, Rust, C
Frontend: React, Angular, Next.js, Redux Toolkit, Material UI (MUI), HTML5, CSS3, jQuery
Backend & APIs: Spring, Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, RESTful Services, GraphQL, Node.js, Express.js, Flask, Django, SQLAlchemy, OAuth 2.0/JWT
Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle, SQLite, pgvector, Kafka
Cloud & DevOps: AWS (ECS Fargate, EC2, RDS, S3, IAM, CloudWatch), Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CI/CD, Git, Linux
Testing & Engineering: JUnit 5, Mockito, Cypress, Jest, Unit Testing, Integration Testing, SonarQube, Microservices, Distributed Systems, Event-Driven Systems, Full-Stack Development, Backend Development, API Development, API Design, Scalability, Reliability, Performance, Security
GenAI: RAG, LLaMA, Pinecone, LangChain, LoRA/DPO Fine-Tuning, MCP Server, Multi-Agent Systems

Education

University of South Florida — Florida, US
MS in Computer Science (GPA: 3.96 / 4.00) — *Aug 2024 – May 2026*

Sathyabama Institute of Science & Technology — Chennai, India
Bachelor of Engineering — *Jun 2019 – May 2023*
